

生物策略格式

KJC, 2019/10/21

類別	生物策略 (Strategy)
生物策略 STRATEGY	冰核捕獲水 (Ice nucleation captures water)
生物系統 LIVING SYSTEM	地衣 有緣肚臍苔蘚 <i>Rhizoplaca</i> (Golden rimmed navel lichen)
功能類別 FUNCTIONS	#獲取、吸收、或過濾液體 #Capture, absorb, or filter liquids
作用機制標題	地衣藉由冰核捕獲水分，一旦溫度升高並且冰融化就吸收水分 (Lichens capture water via ice nucleation, absorbing the moisture once the temperature rises and the ice melts.)
生物系統/作用機制示意圖	  
作用機制摘要說明 (SUMMARY OF FUNCTIONING MECHANISMS)	
文獻引用 (REFERENCES)	
	「冰核的活動在溫度高於-5 °C時，可以藉由增強水分凝結或是在溫度低於0 °C時，水蒸氣中的冰沉積發生得會更早，以增強對大氣水分的吸收。一旦形成冰晶格 (ice lattice)，進一步的沉積就更容易變得穩定。當溫度升高時，地衣葉狀體 (thallus) 便可以從融化的冰中吸收水分。」(Kieft 1988: 1680)
	“Ice nucleation activity at temperatures warmer than -5°C may enhance the uptake of atmospheric moisture by enhancing condensation and/or causing deposition of ice from water vapor to occur earlier as the temperature drops below 0°C. Once an ice lattice is formed, further

deposition occurs more readily. When the temperature rises, the lichen thallus may then absorb moisture from the melting ice.” (Kieft 1988: 1680)
